

AFTER BURNER

Device for smoke and odor elimination

■ AFTER BUNNER

A separate burner eliminates the smoke and reduces the odor.

This is a pollution prevention device that has many good merits. The smoke that is generated during the roasting is cleanly eliminated by burning it in a burner installed separately and also the odor is reduced at the same time. There is also no accumulation of particles on the chimney from the outlet of the furnace, so there is no time required for cleaning.

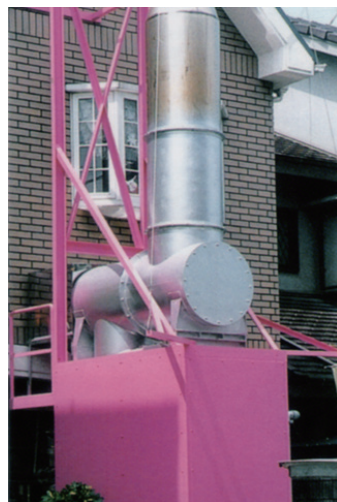

■ Device for smoke and odor elimination

The smoke and odors are eliminated using the latest technologies and our experience as a manufacturer.

Pollution prevention equipment is essential for large-scale plants. We respond to all kinds of environmental problem by using our technology and experience as a manufacturer, including with types that eliminate the smoke on single exhausts and types that eliminate the smoke for both the exhaust and cooling.

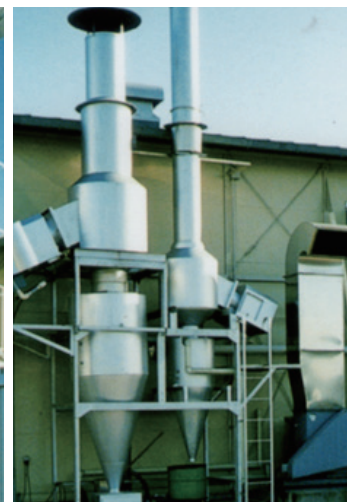

Example installation of type for both exhaust and cooling
