

FUJI ROYAL ROASTER

R-110

10kg

Fuji Royal roasters are popular for their outstanding ease of handling and reliability, which we have made possible as a company that thoroughly understands coffee beans. This is a reassuring 10 kg type that can be used for roasting in large volumes.

This is the only machine in Fuji Royal's range of compact roasters that has an exhaust fan included as standard, which makes continuous roasting possible. It is a roaster for commercial stores that mass-produce beans.
